A1) Zensung is an Insurtech company that provides insurance solutions to clients by customizing premiums based on usage, telematics and using AI. Unique global contributions include Drivesung which calculates risk scores and corresponding premiums using telematics.

A2) My role - Data and AI Modeller
→ develop data and AI-driven models that ~~analyse~~ analyze EV user, vehicle, telematics data to assess insurance risk and give appropriate pricing. Key activities will include data collection, exploratory data analysis, identifying risks and generating scores. Expected learning outcomes: practical data analysis, machine learning, prompt engineering.
